PROJECTS

phone repair (07/2018 - Present)

- During the free days before the start of the school year, I learned mobile repair and I repair the phones at home

Project in C#

- Creating and modeling accomodation units management system, designed in Multitier architecture model, with a windowed GUI system and working with a database in XML.
- Using Design Patterns techniques: singleton & factory, with .NET and WPF platforms.

Project in Java

- Designed and modeling a virtual 3-dimensional graphical scene, using Design Patterns techniques supporting Agile Development in Java using IntelliJ.

Application with Android Studio

- The goal was to create competition between the transportation companies and allow customers to find for themselves the optimal means of transportation.
- Designed in MVVM architecture model, using Firebase for database, AVD (emulator of android studio)

CERTIFICATES

High School diploma (09/2011 - 07/2013)
